

# Testing L<sup>A</sup>T<sub>E</sub>X

Boris Kourtoukov

Wednesday 9<sup>th</sup> October, 2013

Working with clojure is quite difficult for me still. I will try to write this series to both learn more about it and work with new ideas.

```
1      (ns ui.core
2        (:require [cljs.core.async :as async
3                  :refer [<! >! chan close! sliding-buffer put! alts!]]
4              [enfocus.core :as ef]
5              [enfocus.effects :as effects]
6              [enfocus.events :as ev]
7              [goog.dom :as dom]
8              [ui.templates :as t :refer [data-set]]
9              [clojure.string :refer [join blank?]])
10       (:require-macros [enfocus.macros :as em]
11                        [cljs.core.async.macros :as m :refer [go alt!]]))
```

Listing 1: Example of a listing.

That was an example ClojureScript namespace that I am using.

Figure 1: A simple caption
